CHALLENGES AND PROSPECTS FOR SOLID STATE CHEMISTRY

University of Sevilla, 9 and 10 September 2016

SUPPORTED BY

CHALLENGES AND PROSPECTS FOR SOLID STATE CHEMISTRY

This Discussion Meeting of the EuCheMS Division of Solid State and Materials Chemistry is focused on the latest developments in synthesis, properties, and structural investigations of solids. The meeting has been held just before the 6th EuCheMS Congress, 11-15 September (euchems-seville2016.eu/).

Topics included:

- Frontiers of solid materials synthesis - FSM
- Structural advances through new methodology – SAM
- Solid state chemistry and applications - SSC
- Rationales for functional materials synthesis - RFM

The conference includes plenary invited talks and poster presentations.

ORGANIZING COMMITTEE

Paul Attfield, University of Edinburgh

Alfonso Caballero, University of Seville and ICMS-CSIC

Martin Jansen, MPI Stuttgart

Antoine Maignan, University of Caen

Emilio Moran, Complutense University Madrid

Jose Antonio Odriozola, University of Seville and ICMS-CSIC

CHALLENGES AND PROSPECTS FOR SOLID STATE CHEMISTRY

University of Sevilla, 9 and 10 September 2016

Program

Friday, 9 September 2016

09:00 - 09:30 Registration

09:30 - 10:00 Opening Remarks

Prof. José Antonio Odriozola, Organizing Committee

Prof. Pilar Malet Maenner, Dean of the Chemistry Department

Prof. Martin Jansen, Chair of Division

Frontiers of solid materials synthesis

Chair: *Maria Gracia Francesconi*

10:00 - 10:50 Ullrich Haussermann, Stockholm University

"Hydrogen incorporation in Zintl phases and transition metal oxides– new environments for the lightest element in the solid state"

10:50 - 11:30 COFFEE BREAK

Chair: *Alfonso Caballero Martínez*

11:30 - 12:20 Andrei Shevelkov, Moscow State University

"Back to the Iron Age: Structure and properties of iron compounds with strong electron correlations"

12:20 - 13:10 Amparo Fuertes, ICMAB Barcelona

"New developments in the chemistry of oxynitride materials"

13:10 - 15:00 LUNCH

Structural advances through new methodology

Chair: *Paul Attfield*

15:00 - 15:50 Florence Babonneau, UMP Paris

"Solid-state NMR characterization of organic-inorganic materials: some recent advances"

15:50 - 16:50 COFFEE BREAK AND POSTER SESSION

Chair: *Wolfgang Bensch*

16:50 - 17:40 Thierry Epicier, INSA Lyon

"Life materials chemistry at the nano scale in environmental transmission electron microscopy"

17:40 - 18:30 Andrew Goodwin, Oxford University
"Local symmetry and hidden order"

Saturday, 10 September 2016

Solid state chemistry and applications

Chair: *Colin Greaves*

10:00 - 10:50 Barbara Albert, TU Darmstadt
"Complexity in borides: exotic solids or useful materials?"

10:50 - 11:40 Clare Grey, Cambridge University
"Challenges for rechargeable batteries - new characterisation approaches and new chemistries"

11:40 - 12:20 COFFEE BREAK

Chair: *Antoine Maignan*

12:20 - 13:10 Teofilo Rojo, CIC energiGUNE
"Towards all solid state batteries"

13:10 - 15:00 LUNCH

Rationales for functional materials synthesis

Chair: *Edmund Cussen*

15:00 - 15:50 Claudia Felser, MPI-CPS Dresden
"Topology – from the materials perspective"

15:50 - 16:40 Maarit Karpinnen, Aalto University
"Layer-engineering of novel functional oxide materials"

16:40 - 17:10 COFFEE BREAK

Chair: *Emilio Moran*

17:10 - 18:00 Joao Rocha, Aveiro University
"Microporous lanthanide silicates and coordination polymers for optical sensing and nanothermometry"

18:00 - 18:30 Quo vadimi?

Panel and audience: Concluding discussion

INDEX

New Double Cation Ordering in High Pressure Double Perovskites A.M. Arévalo-López, E. Solana-Madruga, A.J. Dos Santos-García, R. Sáez-Puche, J.P. Attfield	FSM1
Uncommon morphological shapes of graphene: 3D graphenes A. Benítez de la Torre, C. Hernández Rentero	FSM2

Abstract:

Ordinary Portland cement (OPC) is an environmentally contentious material, as for every ton of OPC produced, ~0.97 tons of CO₂ are released. This opens the need of designing new formulations of cements formed by low calcite-demanding phases, such as ye'elimit, that release less CO₂ during their fabrication. Belite-Alite-Ye'elimit (BAY) cements are promising eco-friendly building materials as OPC substitutes at a large scale [1]. The reaction of alite and ye'elimit with water should develop cements with high mechanical strengths at early ages, while belite will contribute to later curing times. However, they develop lower mechanical strengths at early-medium ages than OPC [2]. It is known that the presence of different polymorphs of belite and ye'elimit affects the hydration due to the different reactivity of those phases [3].

The aim of this work is to process, characterize and scale-up a non-active BAY clinker (with coexisting alite, β-belite and ye'elimit) and an active-BAY clinker (with coexisting alite, α'_H-belite and ye'elimit) to develop, in a future step, comparable mechanical strengths to OPC. The parameters evolved in the preparation of the clinker have been optimized, such as the selection of raw materials (including mineralizers and activators), clinkering conditions and scale-up methodology. Finally, the clinker was characterized through laboratory X-ray powder diffraction in combination with the Rietveld methodology.
